

Definition Statement: How might we design a sculpting wheel to have varying heights for the use of hand-building pieces in Ceramics making?

* height-adjustable desk (ikea)

X books (to hold it up)

X Standing up (lol)

pneumatic pillars (what is that)

drone holding table up

rocket powered table

you holding piece up

* Wheel itself can move up & down - stability issues?

* vertical rails sliding

table hooks (like cabinets)

* microphone boom arm to hold wheel
=> tripod extends down

* hooks to hold plastic bag for moisture levels
